Aussie Locker XD-13530 Installation Supplement **Intercam Spacing Variation**

Thank you for your purchase of the XD-13530 Dana 35 Aussie Locker

Due to varying casting differences in the Dana 35 carrier, the Aussie Locker XD-13530 has been designed to compensate for these inconsistencies. When measuring your cross pint to spacer and your inner-cam spacing you may find that the specifications contained in the Installation Manual will not work with your Dana 35. The following are modifications to the installation process for the XD-13530 only if you cannot meet the two spacing specifications called out in the Installation Manual:

Spacer to cross shaft may go to .025 and be considered within normal range.

Inner-cam spacing ideal center point is .160 but up to .183 is considered within an acceptable range.

If your measurements fall outside of these ranges, contact us at CustomerService@AussieLocker.com or call us anytime at 585-723-1489. Calls after normal business hours will be directed to our answering service and then emailed to our technical support team.

Aussie lockers are 100% made in the USA.
